@WeRateDogs's idea is simple: It will let you hilariously rate your dog on Twitter and share the love with 8.9 million followers. Sniffing through hundreds of tweets to come up with some cool insights to share has been one slightly *ruff* but awesome challenge.

One of the main challenges of analysing the dataset I had was: how to objectively categorise these adorable tweets? A good example was the rating system which was most likely be more than 10 and that is just fine, because they're all good dogs, Brent.

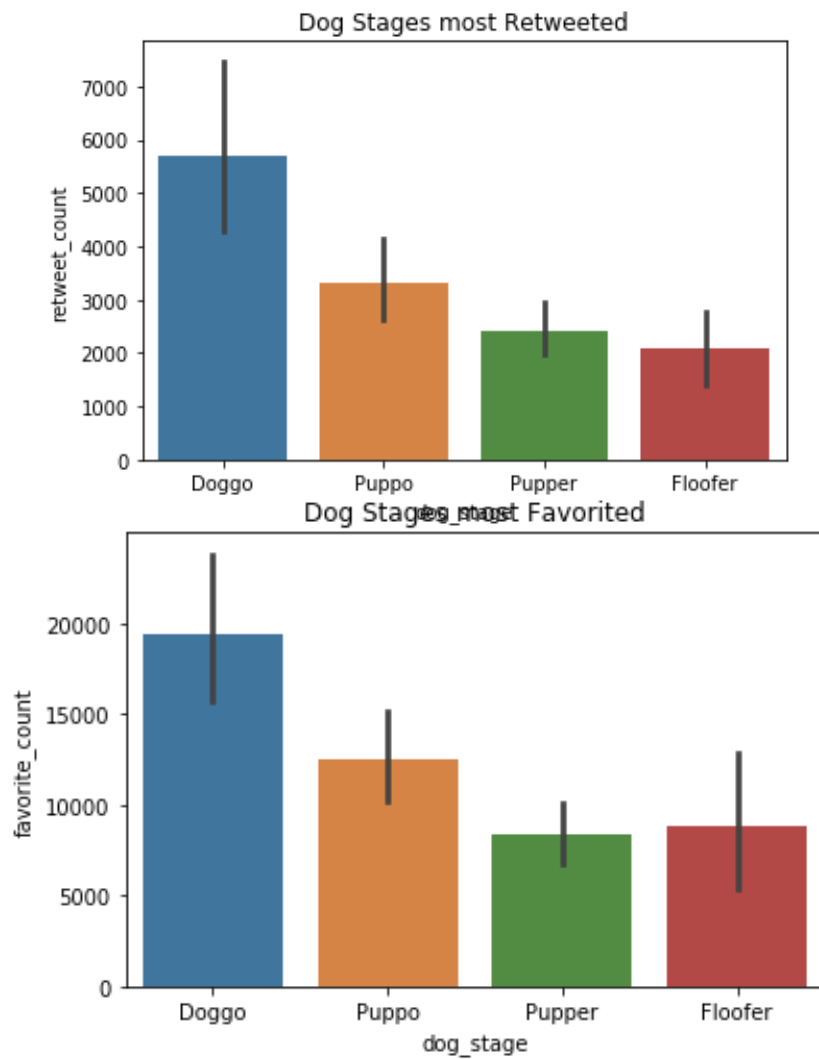

I tried to look at some of the fun questions to answer like: is there a favourite breed, a favourite name, dog stage?

Let's start with the various stages of a dog, more precisely: a *Doggo*, *Puppo*, *Pupper*, *Floofer*

Yes, these are all valid developmental stages according to WeRateDogs which defines the various developmental stages of Dogs as shown below into four stages Doggo, Puppo, Pupper, Floofer

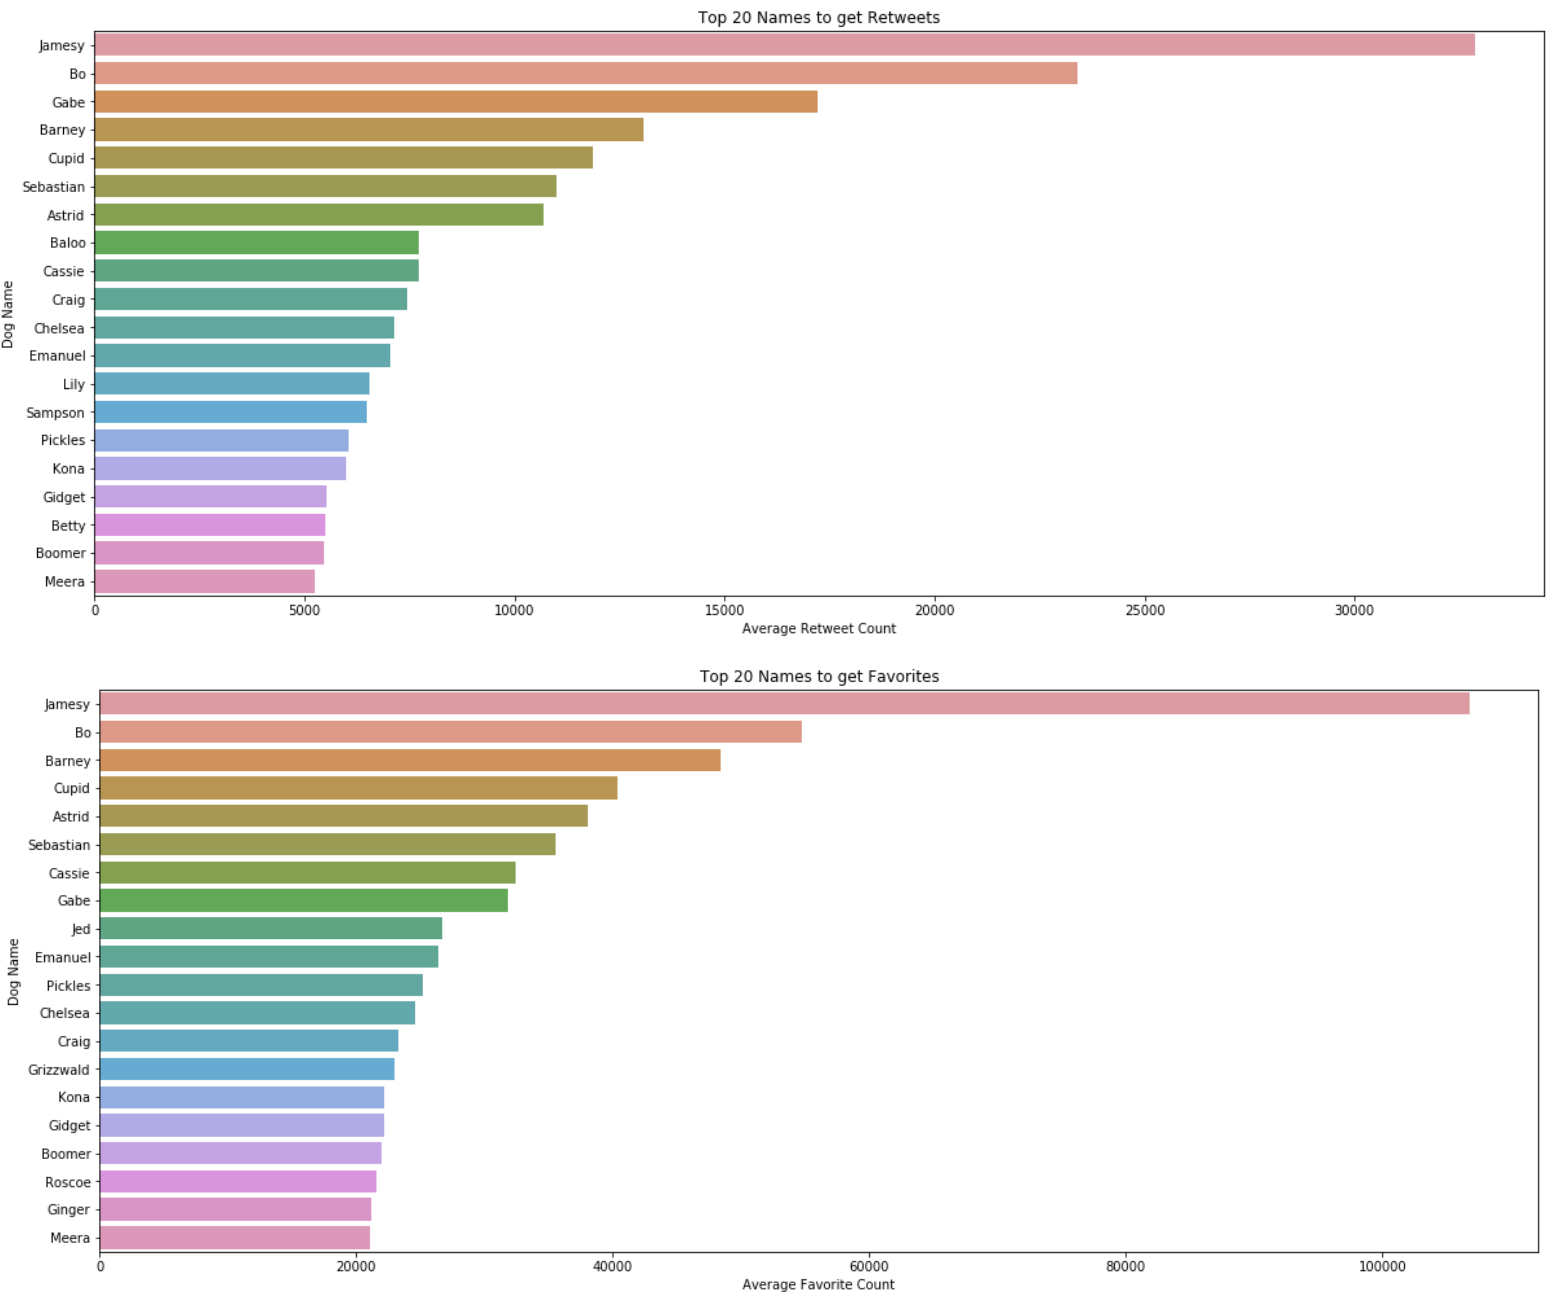

I wanted to see who was gaining more popularity among the different stages in terms of retweets and favourites. Here were the results:

Doggo seemed to be an all time favourite!

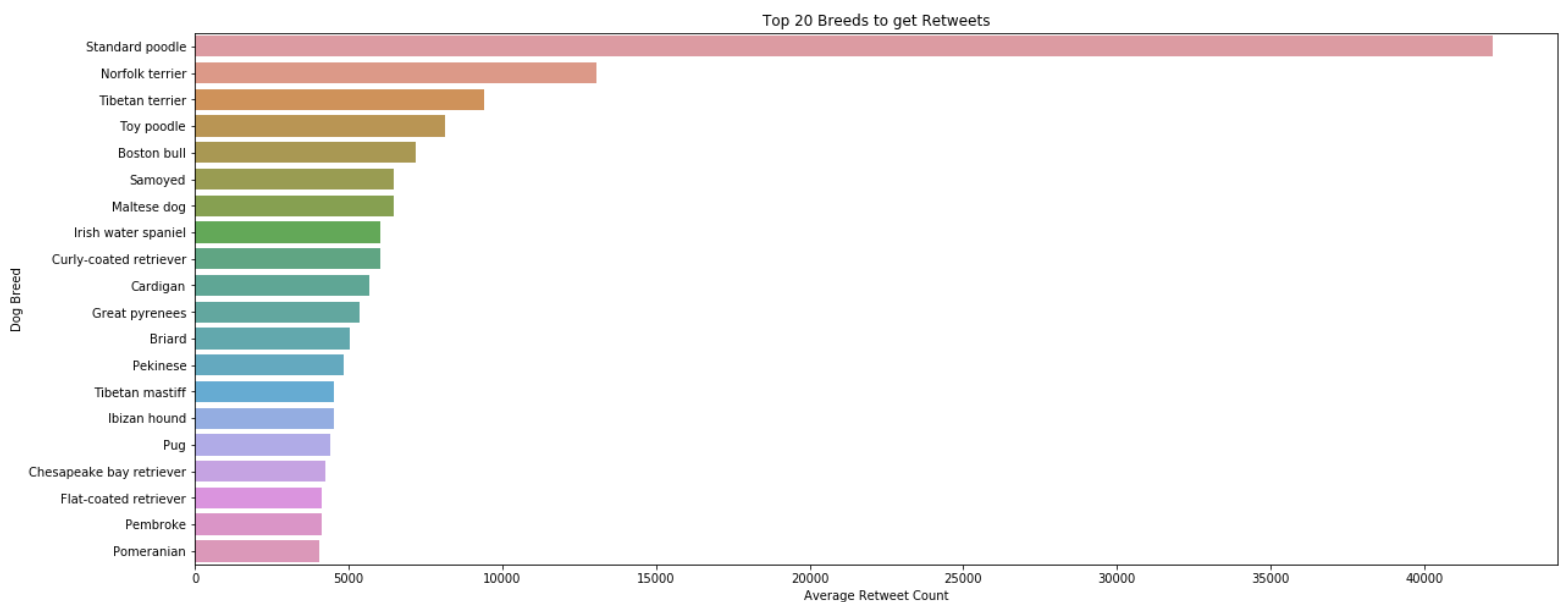

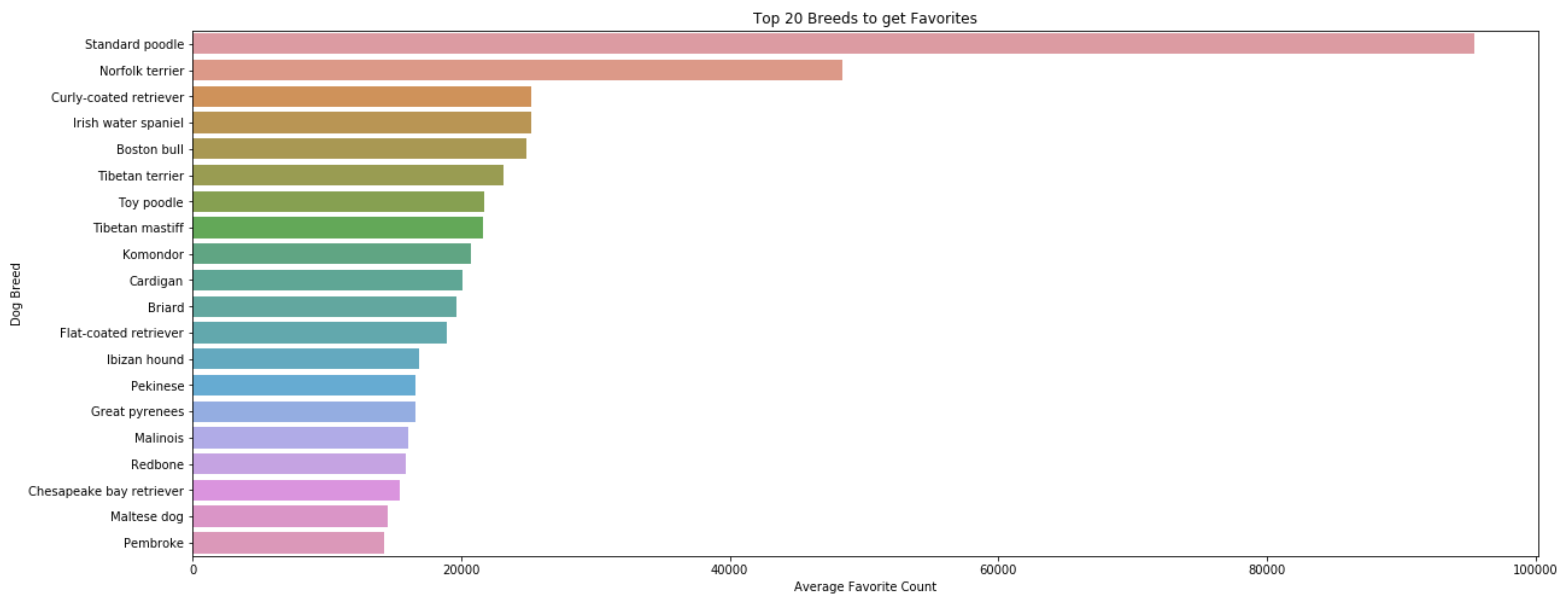

How about the all time favourite Dog Name and Breed:

Here is a list of the top 20 names and their average retweets and favourites

Jamesy is an all time favourite. Who would have thought!

Here is a list of Top Dog Breeds and their average Retweet and Favourite counts:

Standard Poodle was an absolute hit!

Thank you!
